& MOBILE!

THE MOST PROTECTION FROM WATER FOR DIESEL FUEL TANKS;
CONTINUOUSLY REMOVES WATER TO PREVENT FORMATION OF SLUDGE,
BACTERIA & FUNGUS, STATIONARY OR OPERATING!

XD EXTREME DUTY PROTECTION

B3C's LATEST breakthrough Water Absorber technology provides EXTREME PROTECTION for the entire diesel fuel system by continuously removing water, preventing algae, sludge buildup, bacteria, and fungus in diesel fuel. This technologically advanced device is designed to be placed into the fuel tank for the whole season making protection from bio-fuels easy. NEW DESIGN allows for use DURING OPERATION!

PROTECTS FROM THE MOST DAMAGING CONTAMINANT - WATER

Water separates out of the fuel, sits on the bottom of the tank and provides a breeding ground for microbial growth. These contaminants clog the fuel system and can cause acids to build up in the fuel leading to damaged components of the fuel tank. XD EXTREME DUTY Diesel Water Absorber is placed in the tank bottom, where it can contact and absorb the free water without harming any fuel system components. WHERE DOES WATER COME FROM?

- Condensation through the fuel system vents
- External leaks in the tank
- Heating and cooling from temperature variations
- Attraction from bio-diesel

EASY TO USE

Simply place into level and stationary fuel tank. Make sure there is free and clear access to bottom of tank. Make sure device does not get tangled in tanks with baffles and sending units if used during operation. Requires tank opening of 2.5 inches or greater.

ENVIRONMENTALLY FRIENDLY

Always dispose of in accordance with federal, state and local laws.
